## About this publication

These release notes provide information about the enhancements and resolved problems in version 1.0.10 of the OZSoft SAP Management Pack for Microsoft System Center Operations Manager 2007 product. This information supplements and supersedes information in the [Installation, Administration and User's Guide](#).

## What's new

This section describes the new SAP Management Pack features provided in this product release.

## What's changed

### Discovery when connected to a Central Monitoring (CEN) System

If the Management Pack is connected to an SAP System that is configured as a Central Monitoring System (CEN) the discovery of the Application Servers and System properties only applies to the CEN System, not all the SAP system connected to the CEN System. However when CCSM Alerts and Metrics are retrieved, if they belong to one of the CEN-connected system the corresponding SAP System Object and Application Server Object will be created in SCOM and Counter/Alerts will be associated with it, thus even though the Management Pack is connected only to the CEN System, the SCOM users will see all CEN-connected Systems and their App Servers in SCOM Console.

### Licensing when connected to a CEN System

The licensing restrictions (the number of connected system allowed) now applies to the CEN-connected Systems – if the limit of the number of the systems is reached – the alerts and metrics for the additional systems will not be posted to SCOM. An Alert will be created in SCOM indicating that the licensing limit is reached.

- ! If the current license key limits the number of connected system and the Management Pack is connected to a CEN system please request a new license key before upgrading to alleviate the disruption of the Management Pack operations.

### SCOM Alerts are generated for Management Pack Connector Events

In case of errors occurring in the SAP Connector, the alerts are now generated, increasing the visibility into issues with the Management Pack operations.

## Corrected problems

The problems listed below were reported in earlier releases of SAP Management Pack and have been corrected in this release.

Tracking Number	Description
<b>BMPSAP000135</b>	There are cases when CCMS Alerts are corrupted on the SAP System and Message Attribute is empty. The Management Pack does not handle the

	situation properly casing the repeated redundant alerts generated.
<b>BMPSAP000137</b>	The instructions for configuring the predefined Performance Dashboard are lacking.
<b>BMPSAP000138</b>	The installation on Windows Server 2008 R2 x64 fails with an error (2869).

Table 1 Problems corrected in this release

## Open issues and resolutions

This section describes issues that remain open in this release. Table 2 lists the tracking numbers.

Tracking Number	Description
	No Open Issues in this release

Table 2 Open Issues and resolutions in this release

## SAP Notes

This section describes existing SAP Notes that need to be evaluated and corresponding relevant fixes applied for the Management Pack to function properly. Table 3 lists the numbers and descriptions.

SAP Note Number	Description	SAP Kernel Release Impacted
	No new relevant SAP Notes

## Installation information

For complete installation information, see the [Installation, Administration and User's Guide](#).

When upgrading to the higher version the current configuration, which includes SAP systems connection parameters, is preserved. However we strongly recommend that you back-up the configuration file *<Installation Directory> \conf\CONFIG.XML* before you start the upgrade. Later you can restore it if the configuration has been lost.

Please re-import the Management Pack into SCOM 2007. There are changes since the previous release. The Management Pack file is located at *<Installation Directory> \scom\OZMP4SAP.mp and OZMP4SAP.xml*.
