About this publication

These release notes provide information about the enhancements and resolved problems in the version 1.0.11 of the OZSoft SAP Management Pack for Microsoft System Center Operations Manager 2007. This information supplements and supersedes information in the [Installation, Administration and User's Guide](#).

What's new

There are no new features in this release.

What's changed

There are no changes in this release.

Corrected problems

The issues listed in Table 1 were reported in earlier releases of SAP Management Pack and have been corrected in this release.

Tracking Number	Description
BMPSAP000136	In the Configuration utility the parameters in SCOM Tab are not saved properly. The changes will not be recognized by SAP Connector.
BMPSAP000138	Improper conversion of the performance counter values causes Connector Events generated.
BMPSAP000139	Improper handling of the empty event attributes values causes Connector Events generated.

Table 1 Problems corrected in this release

Open issues and resolutions

This section describes issues that remain open in this release. Table 2 lists the tracking numbers.

Tracking Number	Description
-----------------	-------------

Table 2 Open Issues and resolutions in this release

Installation information

For complete installation information, see the [Installation, Administration and User's Guide](#).

Usually when upgrading to the higher version the current configuration, which includes SAP systems connection parameters, is preserved. However we strongly recommend that you back-up the configuration file *<Installation Directory> \conf\CONFIG.XML* before you start the upgrade. Later you can restore it if the configuration has been lost.

There is no need to re-import the management pack into SCOM 2007. There are no changes since release 1.0.10.0. The management pack file is located at *<Installation Directory> \scom\OZMP4SAP.mp*.
