About this publication

These release notes provide information about the enhancements and resolved problems in the version 1.0.12 of the OZSoft SAP Management Pack for Microsoft System Center Operations Manager 2007. This information supplements and supersedes information in the [Installation, Administration and User's Guide](#).

What's new

SAP Connection parameters are now documented

We included a detailed description of all supported SAP connection parameters. Please refer to *Appendix A* in [Installation and User's Guide](#).

Essential SAP Metrics Monitor Definition Supplied

In order to speed up the implementation of SAP monitoring with the Management Pack we now supply an SAP Monitor definition that includes the essential performance counters. The Monitor definition is to be imported into SAP CCMS. Please refer to *Appendix B* in [Installation and User's Guide](#).

What's changed

There are no changes in this release.

Corrected problems

The issues listed in Table 1 were reported in earlier releases of SAP Management Pack and have been corrected in this release.

Tracking Number	Description
BMPSAP000140	SAP Connector scheduling mechanism does not work properly on Windows Server 2008, causing missed collection intervals
BMPSAP000141	When the SAP Connector discovers that an SAP App Server has been removed – the SAP System object in SCOM is removed erroneously.
BMPSAP000142	If in the Configuration Utility, the SCOM server field is left blank, the SAP Connector generates an exception and does not connect to the local RMS.

Table 1 Problems corrected in this release

Open issues and resolutions

This section describes issues that remain open in this release. Table 2 lists the tracking numbers.

Tracking Number	Description
BMPSAP000143	On Windows Server 2008 if the Configuration Utility is ran as a user different from Administrator, the changes to the configuration file are saved in a user-specific file and not visible by the SAP Connector. Always start the Configuration Utility by creating a shortcut and selecting “run as administrator” in the context menu.

Table 2 Open Issues and resolutions in this release

Installation information

For complete installation information, see the [Installation, Administration and User's Guide](#).

When upgrading to the higher version the current configuration, which includes SAP systems connection parameters, is preserved. However we strongly recommend that you back-up the configuration file <Installation Directory> \conf\CONFIG.XML before you start the upgrade. Later you can restore it if the configuration has been lost.

There is no need to re-import the management pack into SCOM 2007. There are no changes since release 1.0.10.0. The management pack file is located at <Installation Directory>\scom\OZMP4SAP.mp.
