About this publication

These release notes provide information about the enhancements and resolved problems in version 1.0.7 of the OZSoft SAP Management Pack for Microsoft System Center Operations Manager 2007 product. This information supplements and supersedes information in the [Installation, Administration and User's Guide](#).

What's new

This section describes the new SAP Management Pack features provided in this product release.

What's changed

Redesigned Management Pack Configuration Utility

SAP Management Pack Configuration Utility has been redesigned to take advantage of the tabbed user interface.

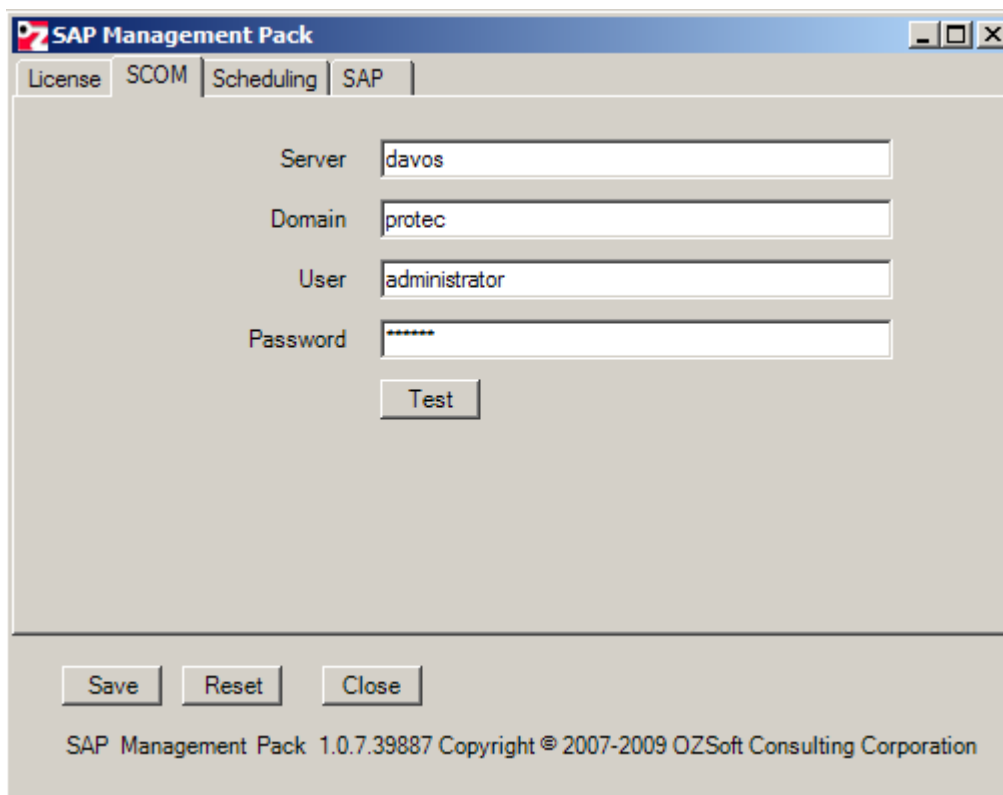

Figure 1 Tabbed Interface in Configuration Utility

SCOM Connection Parameters in Configuration Utility

The way SCOM Connection Parameters are interpreted has changed. As a fix for the bug BMPSAP000130 - it is possible now to supply only the necessary information:

- 1) If **Server** field is left blank – connecting to the SCOM on “localhost”
- 2) If **Domain** field is left blank – using current service Domain
- 3) If **Domain** and **Credentials** fields are left blank – using current service Domain & Credentials

Corrected problems

The problems listed below were reported in earlier releases of SAP Management Pack and have been corrected in this release.

Tracking Number	Description
BMPSAP000130	When no SCOM credentials are provided in MP Configuration Utility, SAP Connector is unable to connect to SCOM.
BMPSAP000131	In some cases the CCMS Metrics values were improperly converted when populating SCOM Performance Counters
BMPSAP000132	Predefined Performance and Availability Monitors do not work properly. State Changes were not detected.

Table 1 Problems corrected in this release

Open issues and resolutions

This section describes issues that remain open in this release. Table 2 lists the tracking numbers.

Tracking Number	Description
	No Open Issues in this release

Table 2 Open Issues and resolutions in this release

SAP Notes

This section describes existing SAP Notes that need to be evaluated and corresponding relevant fixes applied for the Management Pack to function properly. Table 3 lists the numbers and descriptions.

SAP Note Number	Description	SAP Kernel Release Impacted
	No new relevant SAP Notes	

Table 3 SAP Notes

Installation information

For complete installation information, see the [Installation, Administration and User’s Guide](#).

Usually when upgrading to the higher version the current configuration, which includes SAP systems connection parameters, is preserved. However we strongly recommend that you back-up the configuration file *<Installation Directory> \conf\CONFIG.XML* before you start the upgrade. Later you can restore it if the configuration has been lost.

Please remember to re-import the management pack into SCOM 2007. The management pack file is located at *<Installation Directory> \scom\OZMP4SAP.mp*. The new version of management pack is 1.0.7.0.
